EDUCATION

Bachelor of Science in Electronics Engineering 2021 – 2025
Caraga State University | Butuan City

PROFESSIONAL EXPERIENCE

WordPress Developer & Content Specialist | New Wine | June 2025 - June 2026
WordPress · Elementor · Rank Math · Canva · Figma · AI-assisted workflows

- Developed and maintained business website pages including the homepage, landing pages, service pages, and blog pages using Elementor, ensuring a professional and user-friendly experience throughout the site.
- Wrote and published articles from October 2025 to May 2026, using AI to assist in drafting and fact-checking while keeping the content accurate, readable, and aligned with the brand voice.
- Followed Rank Math SEO guidelines when creating content, which contributed to noticeable improvements in the site's search engine visibility over time.
- Created graphic design materials for the business including social media promotional graphics, website banners, and blog thumbnails primarily using Canva, with some exploration in Figma.
- Leveraged AI tools across both writing and design tasks to work more efficiently while keeping the overall quality of output high and consistent.

PROJECTS

Local Growth UI (In Progress) June 2026 - Present
Next.js 16 · React 19 · TypeScript · Tailwind CSS v4 · Prisma ORM · PostgreSQL · Docker

- Building a full-stack CRM platform for local businesses to manage leads, appointments, and growth workflows from a single interface.
- Developed a responsive application shell with sidebar and mobile navigation, along with a reusable design system covering core UI components.
- Set up authentication UI with form validation and Google Sign-In prepared, backed by Dockerized PostgreSQL and Prisma ORM with core data models in place.
- Currently implementing authentication backend, Google OAuth, and the CRM data layer including lead pipeline and status tracking.

ETracking April 2026
n8n · Google Sheets · Telegram Bot API · Google Gemini AI · Cloudflare Tunnel

- Built a self-hosted AI-powered expense tracking automation that accepts inputs via Telegram in text, image, and voice formats.
- Integrated Google Gemini to parse and extract structured expense data from unstructured multi-modal inputs, then automatically appended entries to a Google Sheets ledger.
- Exposed the local n8n instance securely to the internet using Cloudflare Tunnel, enabling reliable webhook delivery without a cloud server.
- Eliminated manual expense logging, creating a zero-friction personal finance workflow accessible from a smartphone.

File Organizer February 2026
Python · PyInstaller · Windows Task Scheduler

- Wrote a Python script that automatically categorizes files in the Downloads folder into sorted directories by type including images, executables, documents, and videos.
- Packaged the script into a standalone executable using PyInstaller and scheduled it to run every hour via Windows Task Scheduler, making it fully automated with no manual intervention required.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, Python, Next.js, React, Tailwind CSS, HTML
Databases: PostgreSQL, Google Sheets (as data store)
Tools & Platforms: n8n (workflow automation), Telegram Bot API, Google Gemini AI, Cloudflare Tunnel, WordPress, Canva, Figma (Web Design)
